

## Financial Control

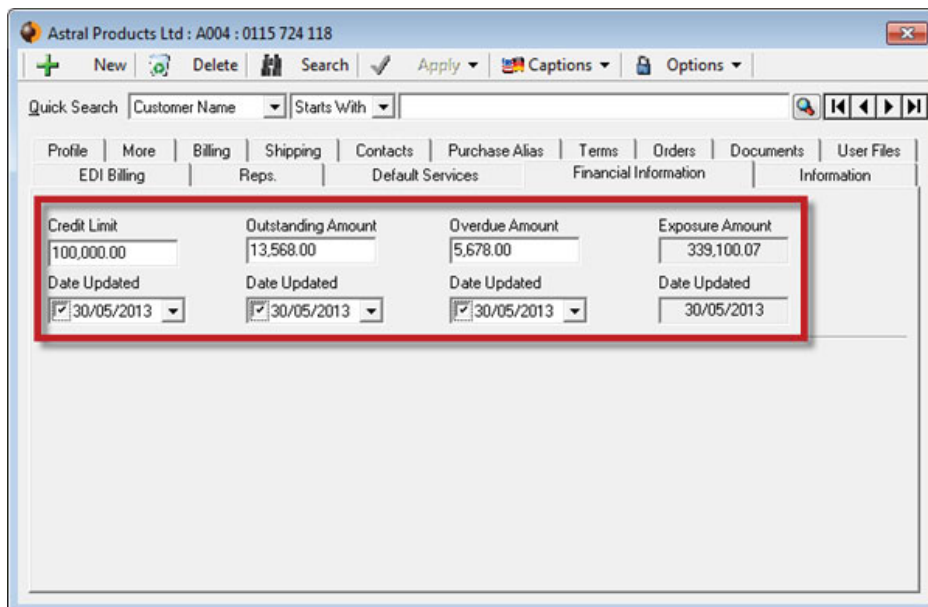

### Does your financial system meet all your needs?

Synchro ERP believes in being the best at what we do and we are foundrymen, so we leave the financials to the experts and let your CFO make his choice of system.

We integrate with a wide range of accounting systems in one of two basic interface types:-

1. A simple export/import link interface which allows you total control over when information is moved in either direction.
2. A completely integrated /automated interface with controls in place so that transactions will only post once approved. Scroll down to view diagrammatical representation.

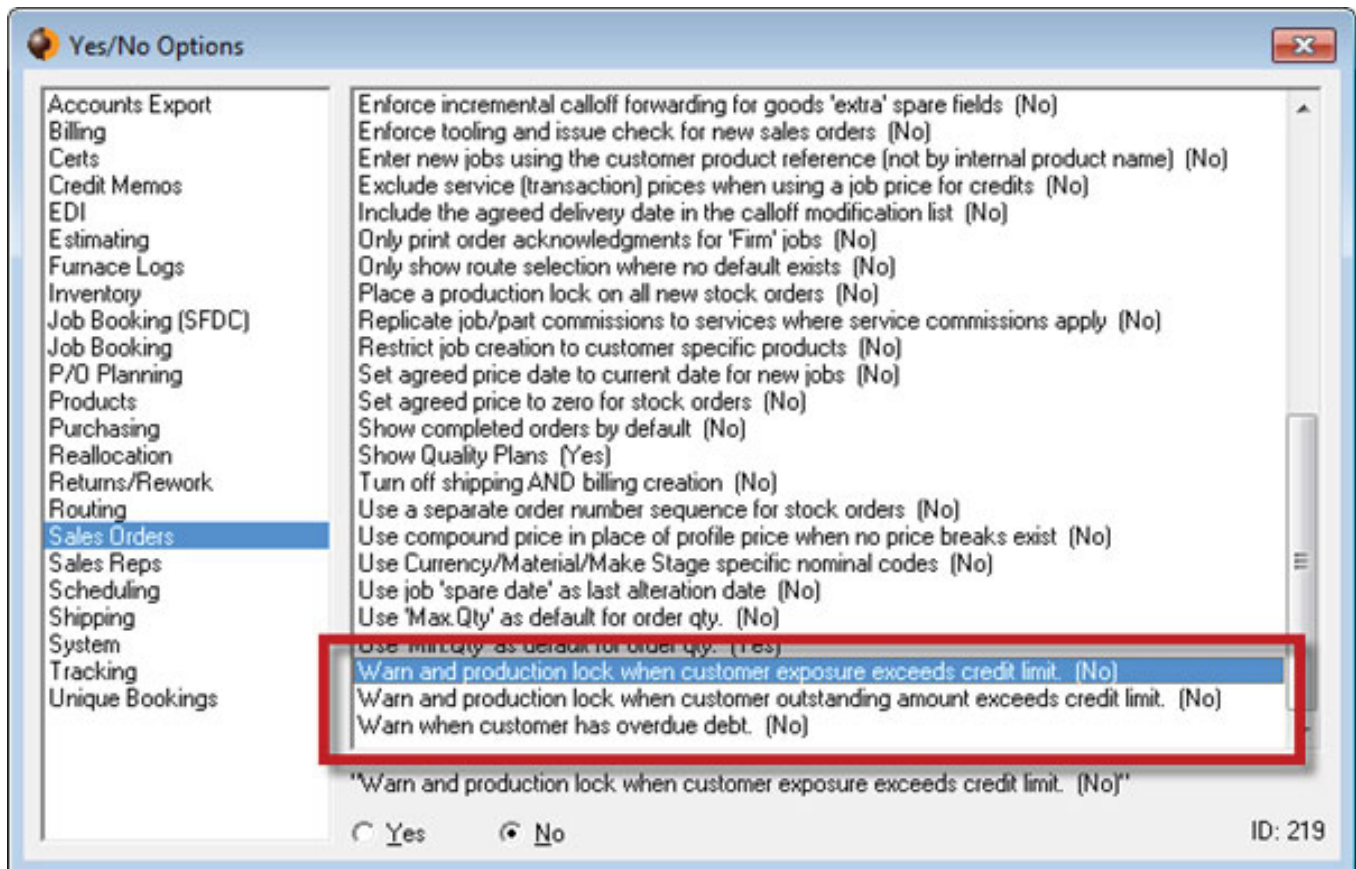

Once data has been imported into Synchro ERP it can be used to restrict the system from carrying out certain operations.

Credit Limit	Outstanding Amount	Overdue Amount	Exposure Amount
100,000.00	13,568.00	5,678.00	339,100.07
Date Updated <input checked="" type="checkbox"/> 30/05/2013	Date Updated <input checked="" type="checkbox"/> 30/05/2013	Date Updated <input checked="" type="checkbox"/> 30/05/2013	Date Updated 30/05/2013

This gives you tight control over your system behaviour thus protecting your business from bad debts.

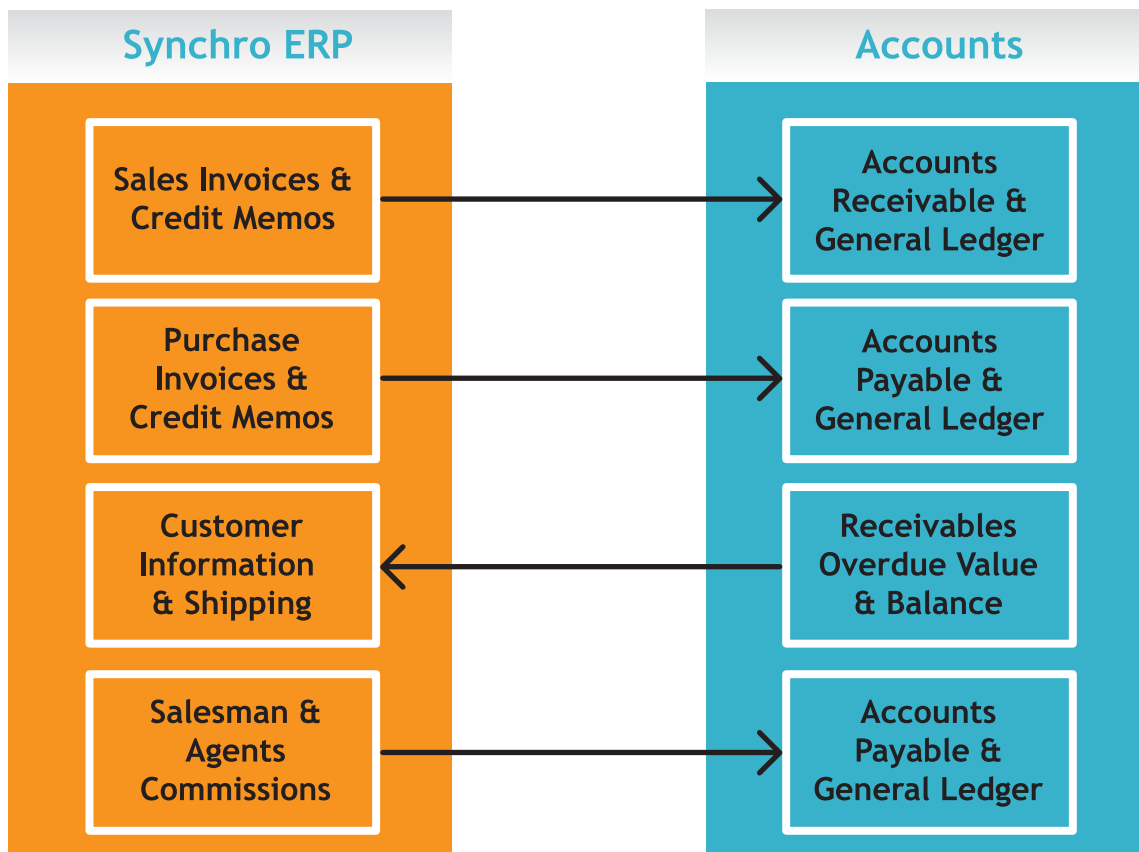

On the following page you will see a diagrammatic representation of the types of transactions that are facilitated by the accounts integration.

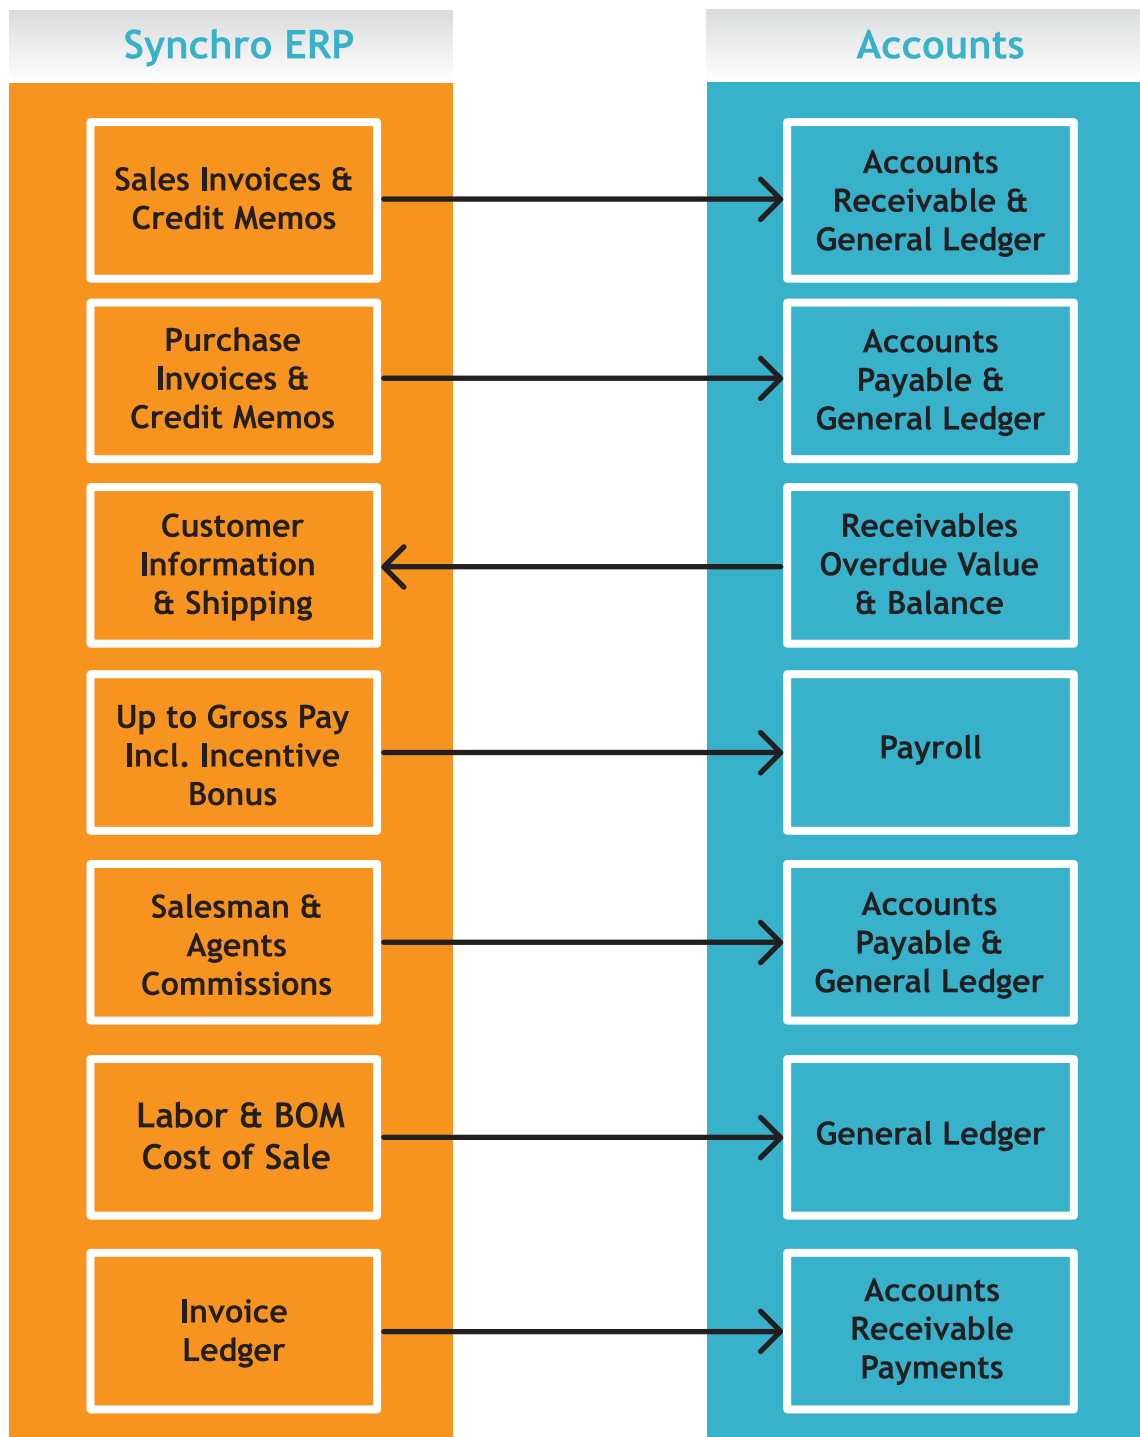

## Synchro ERP Simple FINANCIAL INTEGRATION

## Synchro ERP FINANCIAL INTEGRATION

Integrated account linking applies to the following

What this means:

1

Simple Link (No Charge)

This method is by a user configurable report which is exported out of Synchro ERP and imported into YOUR accounting software.

or

2

Seamless Linking (Charged)

A single user license is required for this link (Dedicated License Required).

Why SYNCHRO's solution offers flexibility and greater choice
